SmartTouch

Ceramic Cooker Mold Protector

**Formulated to Reduce Cleaning and Prevent
Mold Stains Between Use or While in Storage**

PROBLEM:

Mold is everywhere, it's an inescapable part of our environment. Anywhere dirt and moisture are left to their own devices, mold will almost certainly creep in. This makes the inside of domed ceramic cookers and grill grates an ideal environment for mold. When left unattended in the off season, or between cooking and grilling use, an ideal sheltered environment is provided for mold spores to settle in and multiply. Before you can put your ceramic cooker or grill grate back into use, you have to scrub the mold and staining away.

SOLUTION:

SmartTouch Ceramic Cooker Mold Protector is both a mold stain protectant *and* cleaner. This non-toxic, odorless liquid formula is safe for all food prep surfaces including all ceramic cookers, grills, smokers, grill trays and covers. Simply spray the entire area 4" to 6" away from the surface until completely covered. Allow to dry completely and do not rinse. Then cover the cooker or grill to protect from rain or snow. SmartTouch will protect from future unsightly mold stains, saving time and money on repeated cleanings between use or following winter storage. Reapply SmartShield Mold Protector after cooker or grill has been used again, once the surfaces have cooled. Safe for use on ceramic steel, enamel, cast iron, wood, vinyl, PVC and other plastics. Available in 32 oz. RTU spray bottle.

For Unclean Surfaces or Existing Mold Stains:

Simply clean and rinse thoroughly to remove mold stains or heavy cooking residue. SmartTouch can be applied over light cooking grease residue to remove mold stains.

Applications for

SmartTouch

CERAMIC COOKER MOLD PROTECTOR

BENEFITS & FEATURES:

non-toxic

odorless

non abrasive

non staining

safe for food prep surfaces

protects surfaces from mold

CONSUMER APPLICATIONS:

domed ceramic cookers
